

Less Weed-Eating. More Water Work.

Weed and brush control for well lots, pump stations, water towers, and lagoon grounds.

Give your operators more time for the system.

Keep Critical Sites Accessible

Pump Stations

Reduce repeat trimming around fence lines, gates, equipment pads, and buildings.

Towers And Tanks

Control brush and saplings around tank sites and access routes.

Well Lots

Target weeds and brush while retaining desirable grass cover around the well.

Stay Ahead Of Lagoon Growth

Manage weeds and encroaching brush while preserving the grass cover that helps protect dikes from erosion.

Ground and drone application options are matched to site access and conditions.

DEQ addresses vegetation removal, mowing, wind action, and access for Chapter 621 lagoons. OAC 252:621-5-1(1), (7).

Precision Application Around Water. Accountable To You.

Site-Specific Selection

Products matched to the site and target vegetation, with label restrictions and well protection in mind.

Careful Application

Applications at label rates, with on-site weather checks.

Clear Records

GPS-verified application records documenting what was applied, where, when, and conditions.

Brush Control That Fits The Site

BrushGuard and **Dormant Season Chemical Pruning** address brush and encroaching limbs. We match timing and follow-up to the species and site.

Chemical treatment does not remove woody material. Cutting or removal may still be needed.

Let's Put A Number On Your Sites.

One site or every site. A one-time treatment or a set schedule. Bring us your site list for a clear, per-site quote.
